

ImpactOS

Program OS – User Acceptance Testing (UAT) Manual

Version: 2.0

Module: Program OS

Audience: Technical User Tester / Product QA / Product Owner / Engineering Team

Testing Type: End-to-End Functional, Business Workflow, Integration & Regression Testing

1. Introduction

This document defines the complete User Acceptance Testing (UAT) process for Program OS.

Unlike unit testing or developer testing, this document validates the platform from a business and operational perspective while also ensuring the technical implementation correctly follows the Program OS Engineering Specification.

The tester is expected to think critically, challenge workflows, identify edge cases, and verify that the implementation aligns with both the intended business processes and technical architecture.

This is not simply a checklist—it is a full operational simulation of a real Future Studio program.

2. Objectives

The objectives of this testing exercise are to verify:

- Program lifecycle management
- Role-based access control
- Workflow integrity
- Multi-user interactions
- Data consistency
- KPI calculations

- Notifications
- Calendar integration
- Reporting
- Contact management
- Team management
- Assignment lifecycle
- Attendance lifecycle
- Coaching workflow
- Program completion workflow
- Regression stability

The tester should actively look for:

- Broken workflows
 - Missing validations
 - Permission leaks
 - Data inconsistencies
 - Duplicate records
 - Performance bottlenecks
 - UI/UX inconsistencies
 - Translation issues
 - Unexpected behaviors
-

3. Business Case Study

Background

Future Studio has approved a new incubation program called:

Talent for Startups

The CEO has approved funding for the program.

The goal is to train 100 aspiring founders over a three-week period before transitioning qualified participants into Venture OS.

Every activity in this document should be performed using this program.

The entire testing process should follow the actual business workflow rather than isolated feature testing.

4. Test Users

Create and configure the following users.

Role	Quantity
Super Admin	1
Program Manager	1
Facilitators/Instructors	3
Participants	100

5. End-to-End Business Workflow

The tester must execute the following phases in order.

Skipping phases is not permitted.

Each phase depends on the successful completion of the previous one.

PHASE 1 — SUPER ADMIN

1. Authentication

Verify:

- Login
- Logout
- Session timeout
- Password reset
- Remember session
- Unauthorized route protection

Expected Result

Only authenticated Super Admins should access administrative functions.

2. Program Creation

Create

Talent for Startups

Validate:

- Required fields
- Optional fields
- Start/end dates
- Status transitions
- Duplicate program prevention
- Slug generation (if applicable)
- Audit logging

Verify the program is immediately visible in the Program Registry.

3. Program Configuration

Configure:

- Vision
- Objectives
- Description
- Expected Outcomes
- Success Metrics
- Duration (3 weeks)

- Program Banner
- Registration Window

Confirm that updates persist after refresh and across sessions.

4. Assign Program Manager

Assign one Program Manager.

Verify:

- Assignment notification
 - Dashboard visibility
 - Permission inheritance
 - Revocation and reassignment behavior
-

5. KPI Configuration

Create KPIs such as:

- Attendance Rate
- Assignment Completion
- Session Participation
- Team Engagement
- Coaching Completion
- Graduation Rate

Confirm KPI definitions are available to the Program Manager and are populated automatically as program activity progresses.

6. Contact Group Creation

Create a contact group named:

Talent for Startups

Verify:

- Group creation
 - Metadata
 - Ownership
 - Searchability
 - Visibility
-

7. Bulk Import Participants

Import 100 participants.

Test:

- Valid CSV
 - Invalid CSV
 - Duplicate emails
 - Duplicate phone numbers
 - Missing mandatory fields
 - Partial import
 - Rollback behavior on failure
 - Import summary
 - Error reporting
-

8. Registration Link

Generate registration links.

Verify:

- Link validity
 - Expiration (if configured)
 - One-time vs reusable behavior
 - Registration completion
 - Email/notification delivery
-

9. Contact Archiving

Archive selected participants.

Confirm:

- Soft delete only
 - Data remains recoverable
 - Restoration preserves history
 - Archived contacts are excluded from active lists and analytics unless explicitly included
-

PHASE 2 — PROGRAM MANAGER

Login as the assigned Program Manager.

10. Program Dashboard

Verify visibility of:

- KPIs
 - Calendar
 - Participants
 - Teams
 - Curriculum
 - Attendance
 - Reports
 - Notifications
-

11. Week Configuration

Create:

Week 1

Week 2

Week 3

Verify ordering, editing, locking, and deletion rules.

12. Curriculum Configuration

Configure weekly learning objectives.

Assign facilitators.

Attach resources.

Validate versioning and update behavior.

13. Session Scheduling

Create multiple sessions.

Verify:

- Calendar synchronization
 - Conflict detection
 - Time zone handling
 - Rescheduling
 - Cancellation
-

14. Attendance Module

For every session:

The facilitator should see every registered participant with attendance controls:

- Present
- Late
- Absent

Verify:

- Attendance saves correctly
- Attendance can be edited (based on permissions)
- Attendance percentages update immediately
- Attendance feeds KPI calculations
- Attendance appears on participant dashboards
- Attendance appears in reports

Attempt invalid operations such as duplicate attendance or attendance for unregistered users.

15. Team Formation

Using the **Talent for Startups** contact group, create participant subgroups.

Example:

- Team Alpha
- Team Bravo
- Team Charlie

Continue until all participants are assigned.

Verify:

- Each participant belongs to exactly one team (unless multi-team support exists)
 - Manual reassignment
 - Bulk assignment
 - Team membership persistence
 - Team dashboards
-

16. Deliverables

Create weekly deliverables.

Assign to:

- Individual participants
- Entire teams

Verify visibility, deadlines, submission status, reminders, and completion tracking.

PHASE 3 — PARTICIPANT

Login as multiple participants.

17. Registration Flow

Complete:

- Registration
- Email verification (if enabled)
- Profile completion
- Password creation

Confirm successful enrollment into the program.

18. Participant Dashboard

Verify:

- Current week
 - Upcoming sessions
 - Attendance percentage
 - KPIs (where applicable)
 - Assignments
 - Team
 - Notifications
 - Calendar
-

19. Assignment Submission

Test submissions using:

- PDF
- DOCX
- PPTX
- ZIP
- Google Drive URL
- External URL

Verify file validation, upload progress, version history, and resubmission behavior.

20. Team Workspace

Confirm participants can:

- View team members
 - View team assignments
 - Submit team work (subject to permissions)
 - Track team progress
-

PHASE 4 — FACILITATOR

Login as a facilitator.

21. Session Delivery

Verify facilitator access to:

- Assigned sessions
 - Attendance
 - Learning materials
 - Participant list
-

22. Assessment Workflow

Review submissions.

Test:

- Accept
- Reject
- Request revision

Verify notifications and audit history.

23. Feedback Workflow

Provide:

- Text feedback
- Scoring (if enabled)
- Recommendations

Verify participant visibility and revision cycle.

24. Coaching Workflow

Schedule follow-up meetings directly from the platform.

Include:

- Date
- Time
- Meeting link
- Notes
- Participant(s)

Verify synchronization across facilitator, participant, and Program Manager calendars.

Complete, reschedule, and cancel meetings to validate the full lifecycle.

PHASE 5 — KPI VALIDATION

Confirm that:

- Attendance KPIs update correctly.
- Submission KPIs update correctly.
- Team engagement reflects actual activity.
- Completion rates are accurate.
- Dashboards match underlying records.

Perform manual calculations on sample data to validate accuracy.

PHASE 6 — REPORTING

Generate and verify:

- Attendance Report
- Participant Report
- Team Report
- Facilitator Performance
- Assignment Report
- KPI Dashboard
- Program Summary

Export each report to supported formats (PDF, Excel, CSV) and validate exported data.

PHASE 7 — SECURITY & PERMISSIONS

Attempt unauthorized actions from each role.

Examples:

- Participant editing KPIs
- Facilitator deleting programs
- Program Manager accessing unrelated programs
- Archived users logging in (if not permitted)

Confirm all unauthorized actions are prevented and properly handled.

PHASE 8 — INTEGRATION TESTING

Validate interactions between Program OS and:

- Contacts
- Calendar
- Notifications
- File Storage
- Authentication
- Audit Logs
- Localization

- Reporting

Ensure data remains synchronized across modules.

PHASE 9 — EDGE CASES

Test scenarios including:

- Importing 1,000 participants
 - Network interruption during uploads
 - Duplicate registrations
 - Invalid file uploads
 - Late attendance updates
 - Removing facilitators mid-program
 - Changing KPIs after program start
 - Restoring archived participants
 - Editing completed sessions
 - Concurrent updates by multiple users
-

PHASE 10 — REGRESSION TESTING

After completing all previous phases, verify:

- Existing programs remain unaffected.
 - Reports remain accurate.
 - Attendance history is preserved.
 - Team assignments remain intact.
 - Notifications continue functioning.
 - Archived contacts restore correctly.
 - No duplicate or orphaned records exist.
 - English and French localization remains consistent.
 - Performance remains acceptable under expected load.
-

Final Acceptance Criteria

Program OS should only be approved when:

- Every workflow in the original Program OS Engineering Specification has been validated.
 - The **Talent for Startups** case study completes successfully from program creation through completion.
 - Every role can complete its responsibilities without permission issues.
 - KPIs accurately reflect operational data.
 - Contacts, participant groups, and archived records behave correctly.
 - Attendance, assignments, coaching, and reporting function as designed.
 - Cross-module integrations are stable.
 - No critical, high-severity, or data-integrity defects remain.
-

Deliverables from the Tester

At the end of testing, the tester should submit:

1. Completed test execution report.
2. List of defects with severity and reproduction steps.
3. Screenshots or recordings for failed scenarios.
4. Regression testing summary.
5. Performance observations.
6. Recommendations for release readiness.

Only after these deliverables are reviewed and all blocking issues are resolved should Program OS be considered ready for production deployment.
