

VentureOS Manual User Acceptance Testing (UAT)

Future Studio Incubation Management System

Purpose

This document defines the official **Manual User Acceptance Testing (UAT)** procedure for VentureOS.

This exercise **must be completed manually**.

Do **not** use AI to generate test data, simulate user interactions, complete workflows, or automate any part of this exercise.

Every venture, founder, document, meeting, report, approval, notification, task, and milestone must be created and tested directly through the application's user interface.

If any workflow, screen, component, feature, page, or asset described in this document has **not yet been implemented**, it is expected to be completed before testing continues.

This document represents the actual operational workflow Future Studio intends to use for incubating and supporting ventures. It is therefore both a testing document and the operational standard for VentureOS.

Case Study

Future Studio has successfully completed its **Startup Launch Accelerator 2026** program.

During the final week of the program, participants formed venture teams to continue building their businesses.

One of these teams has demonstrated strong potential and has officially graduated into VentureOS.

The purpose of VentureOS is to support founders beyond training by providing structured incubation, accountability, mentoring, documentation, milestone tracking, and investment readiness.

Unlike ProgramOS, where participants complete weekly learning activities, VentureOS manages the actual growth of a startup from idea validation to investment readiness.

As a tester, your responsibility is to verify that this complete journey can be managed successfully through VentureOS.

Test Requirements

Before beginning the exercise, ensure the following users exist.

Super Admin

Responsible for platform oversight.

Venture Mentor

Responsible for mentoring and reviewing the venture.

Example

Michael Adebayo

Venture

NovaSpark Ventures

Industry

Education Technology

Country

Benin Republic

Stage

Early Stage Startup

Founders

Founder 1

Alice Johnson

Founder 2

Brian Mensah

Venture Entry

Verify that the venture can enter VentureOS using one of the following methods.

Option One

Transition directly from ProgramOS.

The following information should already exist.

- Venture Name
 - Founders
 - Team Members
 - Program History
 - Assigned Mentor
 - Previous Activities
-

Option Two

Register a completely new venture manually.

Both methods should produce exactly the same Venture Profile inside VentureOS.

Super Admin Dashboard

Log in as Super Admin.

Navigate to VentureOS.

The dashboard should display all ventures in a **table layout**.

Each row should display information such as:

- Venture Name
- Industry
- Current Stage
- Assigned Mentor
- Progress Percentage
- Profile Completion
- Current Weekly Focus
- Last Updated
- Overall Status

The Super Admin should be able to search, filter and open any venture.

Selecting a venture should open the complete Venture Profile.

Venture Profile

Verify that the Venture Profile contains all major sections.

Basic Information

- Venture Logo
- Venture Name
- Tagline
- Business Description
- Industry
- Website

- Email Address
 - Phone Number
 - Business Address
 - Country
 - Social Media Links
-

Founder Information

- Founder Name
 - Co-Founder Name
 - Team Members
 - Staff Count
 - Founder Biography
 - Founder Contact Information
-

Business Information

- Business Model
 - Revenue Model
 - Target Market
 - Customer Segment
 - Problem Statement
 - Proposed Solution
 - Current Traction
 - Competitor Analysis
-

Documents

Verify the venture can upload the following.

- Company Logo
- Pitch Deck PDF
- Pitch Deck URL
- Business Model Canvas
- Financial Projection
- Executive Summary
- Go-to-Market Strategy

- Product Roadmap
- Customer Validation Report
- Branding Assets
- Legal Registration Documents

The system should automatically calculate the Venture Profile Completion Percentage.

Example

Logo uploaded

5%

Business Description completed

15%

Founder information completed

30%

Pitch Deck uploaded

45%

Business Model Canvas uploaded

60%

Financial Projection uploaded

75%

Validation Report uploaded

90%

Legal Documentation uploaded

100%

The completion percentage should update automatically without manual intervention.

Founder Dashboard

Log in as the Founder.

Verify that the dashboard provides a clear picture of the venture.

The founder should immediately see:

- Venture Progress
- Current Stage
- Current Weekly Goal
- Assigned Activities
- Pending Activities
- Upcoming Meetings
- Mentor Feedback
- Notifications
- Profile Completion
- Investment Readiness Progress

The founder should always understand:

What have I completed?

What am I currently working on?

What should I work on next?

Standard Venture Journey

Every venture should follow Future Studio's standard incubation journey.

This framework should already exist inside VentureOS.

It is **not** something the founder creates.

Instead, VentureOS should provide it as the standard venture development roadmap.

Example progression:

✓ Complete Venture Profile

↓

Define the Problem

Validate the Idea

Identify Target Customers

Develop Business Model Canvas

Define Value Proposition

Conduct Market Research

Build Brand Identity

Prepare Pitch Deck

Develop Go-to-Market Strategy

Build MVP

Acquire First Customers

Validate Product-Market Fit

Prepare Investment Readiness

Become Investment Ready

Each stage should initially be locked except the first incomplete stage.

Completed stages should display as completed.

The next stage should automatically become active once approved by the mentor.

Weekly Operations

The roadmap above represents the venture's overall journey.

Each week, the mentor should create activities under the venture's current stage.

Example

Current Stage

Develop Business Model Canvas

Weekly Activities

- Meet with founders.
- Understand customer segment.
- Define revenue model.
- Review competitors.
- Complete Business Model Canvas.
- Submit document.

A different venture may require different activities under the same stage.

The stage remains In Progress until the mentor confirms the expected outcome has been achieved.

Once approved, the next stage becomes active.

Facilitator Playbook

Every incubation stage should have a standard review guide available to mentors.

The playbook helps ensure every mentor evaluates ventures consistently.

The playbook should define:

- Objective
- Expected Outcome
- Questions to Ask
- Evidence Required
- Required Documents
- Common Mistakes
- Approval Criteria

The mentor should use this playbook when reviewing venture progress.

Weekly Reporting

Every Monday, founders should receive a reminder to complete:

- Weekly Focus
- Planned Activities
- Expected Deliverables

Every Friday, founders should receive another reminder to submit:

- Progress Summary
- Completed Activities
- Current Challenges
- Support Required
- Next Week's Focus

If a report has not been submitted, the mentor should automatically receive a notification.

The Super Admin should also be able to monitor reporting compliance.

Mentor Workflow

The mentor logs into VentureOS.

The mentor reviews the venture's weekly report.

Example

Weekly Goal

Complete Business Model Canvas.

Progress

Business Model Canvas completed.

Challenge

Revenue model still unclear.

Support Needed

Need guidance on pricing.

The mentor reviews the report.

If satisfied,

Approve it.

If improvements are required,

Reject it.

Provide detailed comments.

Schedule a follow-up meeting.

Calendar Integration

When a meeting is scheduled,

verify that it appears on:

- Founder's Calendar
- Mentor's Calendar

The Super Admin should also see that a follow-up meeting has been scheduled.

Notifications

Verify notifications for:

- Weekly reminder
 - Report submitted
 - Report approved
 - Report rejected
 - Meeting scheduled
 - Meeting reminder
 - New mentor feedback
 - Document uploaded
 - Document approved
 - Document rejected
 - Stage completed
-

Document Review

The founder uploads a Pitch Deck.

The mentor reviews it.

Scenario One

Approve the document.

Leave positive feedback.

The founder should immediately receive:

- Notification
 - Feedback
 - Approval Status
-

Scenario Two

Reject the document.

Provide feedback.

Request corrections.

The document should remain open until a revised version is submitted.

Once resubmitted,

Approve it.

Super Admin Monitoring

Throughout the incubation process,

the Super Admin should always be able to monitor:

- Venture Progress
- Weekly Reports
- Mentor Activities
- Meeting History
- Stage Completion
- Outstanding Tasks
- Blockers
- Uploaded Documents
- Founder Activity
- Overall Venture Health

The Super Admin should never lose visibility of any venture.

Investment Readiness

Once incubation milestones have been completed,

verify that VentureOS begins preparing the venture for investment.

Examples:

Investment Checklist

- Pitch Deck
- Business Model Canvas
- Financial Projection
- Customer Validation
- Go-to-Market Strategy
- Branding Assets
- Team Information
- Company Documents

The platform should indicate which documents remain outstanding.

Once all required items are approved,

the venture should automatically become

Investment Ready.

Long-Term Growth Journey

After becoming investment ready,

the venture should continue through additional growth stages.

Examples include:

- Investor Introductions
- Fundraising Preparation
- Seed Funding
- Customer Growth
- Revenue Growth
- Product Expansion
- Series A Readiness
- Series A
- Regional Expansion
- Series B Readiness
- Scale Operations

Future Studio may customize these stages for different ventures.

Final Acceptance Checklist

VentureOS will be considered complete only when all of the following have been successfully tested manually.

Venture Registration

- ☐ Transition from ProgramOS works correctly.
 - ☐ Direct registration works correctly.
 - ☐ Founder information is stored correctly.
 - ☐ Venture profile loads successfully.
-

Profile Completion

- ☐ Progress percentage updates automatically.
 - ☐ Required fields are tracked correctly.
 - ☐ Missing documents reduce completion percentage.
 - ☐ Completion reaches 100% after all required information is submitted.
-

Founder Experience

- ☐ Founder dashboard displays meaningful progress.
 - ☐ Founder understands what has been completed.
 - ☐ Founder understands what should be done next.
 - ☐ Weekly goals are visible.
 - ☐ Notifications are working.
-

Mentor Experience

- ☐ Mentor reviews reports.
 - ☐ Mentor approves reports.
 - ☐ Mentor rejects reports.
 - ☐ Mentor schedules meetings.
 - ☐ Mentor feedback is visible.
-

Weekly Operations

- ☐ Monday reminders are sent.
 - ☐ Friday reminders are sent.
 - ☐ Weekly reports can be submitted.
 - ☐ Missed reports notify mentors.
-

Venture Journey

- ☐ Standard incubation journey is available.
 - ☐ Current stage is highlighted.
 - ☐ Completed stages are marked correctly.
 - ☐ Next stage unlocks after approval.
 - ☐ Weekly activities support the current stage.
-

Document Management

- ☐ Documents upload successfully.
- ☐ Documents can be reviewed.

- ☐ Documents can be approved.
 - ☐ Documents can be rejected.
 - ☐ Revised documents can be resubmitted.
-

Meetings

- ☐ Meetings appear on founder calendar.
 - ☐ Meetings appear on mentor calendar.
 - ☐ Super Admin can monitor meetings.
-

Notifications

- ☐ Report notifications work.
 - ☐ Meeting notifications work.
 - ☐ Approval notifications work.
 - ☐ Rejection notifications work.
 - ☐ Document notifications work.
-

Investment Readiness

- ☐ Required documents are tracked.
 - ☐ Outstanding items are visible.
 - ☐ Investment Ready status updates correctly.
-

Super Admin Oversight

- ☐ Super Admin can monitor every venture.
 - ☐ Super Admin can review progress across ventures.
 - ☐ Super Admin can monitor mentor activity.
 - ☐ Super Admin can identify blocked ventures.
 - ☐ Super Admin has complete operational visibility.
-

Final Result

VentureOS should function as an active venture incubation operating system—not simply a database of startups. Every founder should receive clear guidance on what to do next, every mentor should have the tools to coach and assess consistently, and the Super Admin should have complete visibility into the progress, health, and investment readiness of every venture under incubation.
